PROJECT REPORT

Alone, we can do so little, together we can do so much.We can learn faster from inspiration and a highly motivated group of people.

The IntCom app is a platform that allows both professionals as well as students to connect with people of similar goals and interests.Students can form study groups to learn a new skill by sharing knowledge, resources and conducting learning activities.The app will allow developers, writers, designers, and other professionals to join the platform and participate in different projects to earn money. Students sometimes find it hard to get the perfect study group. IntCom will help them to learn and grow with the perfect circle.

TRACK

This project falls under the educational track.

Technology is driving force for educational transformation and increase students learning options. A platform that allows students to join a community that is focussed on a particular interest or a project will help a person see different perspectives of the same thing and form connections with technological experts.

SOFTWARE REQUIREMENTS

The project uses ReactJS library along with Firebase realtime database to create a realtime chat environment.

SCOPE AND PRACTICALITY

In addition to the above mentioned features the app also provisions students with similar interests to collaborate with each other to study a common topic.

The IntCom app is a free, easy to use and feasible app that does not have any big constraints to its use.The app is as simple as a chat application.Students or professionals can search for the related courses or subjects they want to study .

They can join interested study group, where people share resources as well as knowlegde and conduct learning activities.

We plan to integrate a chat bot into the app.

COMPETITION

Currently, students make groups in known chat apps like whatsapp or telegram. This app would help them to have a focussed platform for learning. In whatsapp or telegram students might get

distracted after a while. But IntCom helps them to be focussed and helps them keep all resources and study materials together.

REVENUE MODEL

The app is free to download.We could add paid courses from well known professionals for further use.
